PROFILE

Dedicated to software development with a collaborative mindset and innovative approach. Possesses a strong foundation in computer science, programming, algorithms, data structures, and the software development lifecycle. Skilled in application design, troubleshooting, and debugging, with a focus on creating impactful solutions that improve user experiences and support business objectives

EDUCATION

B.E Computer Science and Engineering

Sathyabama Institute of Science and Technology

CGPA: 7.55

SKILLS

Python	ML	Power BI
AWS	SQL	Web Development
Linux	Web 3	

PROJECTS

Drive Legal AI

- Developed an AI-powered road safety and traffic law assistance platform.
- Implemented traffic violation analysis and challan calculation features.
- Provided users with traffic rules, regulations, and legal guidance.
- Built an interactive web interface using Python and Streamlit.
- Utilized AI and NLP techniques to improve user interaction and information access.

NLP-Based Customer Service Chatbot

- Developed an intelligent chatbot to automate customer query handling.
- Implemented NLP techniques for intent recognition and response generation.
- Trained a machine learning model for accurate intent classification.
- Designed a user-friendly GUI for seamless interaction.
- Integrated chat history management to enhance user experience.

Sentiment-Aware Q&A System

- Built a question-answering application capable of detecting user sentiment.
- Applied sentiment analysis to generate context-aware responses.

- Integrated NLP techniques to improve response relevance and accuracy.
- Developed an interactive web interface using Streamlit.
- Enhanced user engagement through personalized response generation.

Distributed Server Monitoring Platform | Python, FastAPI, Streamlit, SQLite

- Developed a distributed monitoring platform to collect and visualize real-time system metrics from multiple servers through a centralized dashboard.
- Built monitoring agents for CPU, memory, disk, network, and uptime tracking, communicating with a FastAPI backend via REST APIs.
- Implemented health scoring, alert generation, historical trend analysis, and server status monitoring.
- Designed a scalable agent-server architecture supporting multi-host monitoring and real-time performance visualization.

Smart Car Parking System with QR Authentication

- Developed a smart parking management system with QR-based authentication.
- Automated vehicle entry and exit verification processes.
- Implemented parking slot tracking and management features.
- Improved security through digital authentication mechanisms.
- Reduced manual effort by automating parking operations.

CERTIFICATES

- NPTL Data Mining
- Deloitte Job Simulation
- Python Certification
